

# 2Go Enterprise Applications Mobility Layer

## 1. What is 2Go Mobile Now technology?

The **2Go Mobile Now** technology, was designed and developed by the brains behind the award-winning **MyBI** solution. Utilising custom developed secure access control and delivery systems, **2Go** enables you to securely work directly with your enterprise systems in exactly the same manner as you would on your office desktop or laptop but using 2Go on your mobile device.

The **2Go EnAML** Platform brings new meaning to the phrase "information at your fingertips" as you can work directly with your content, including full editing and object creation capabilities, wherever you happen to be, whether on a train, in an airport lounge. So you'll be able to dramatically improve the rate at which you can get things done – no more making a mental note to update the spreadsheet when you get back to the office, no more waiting to tweak those changes in the urgently needed presentation slide deck ahead of the meeting, no more feeling 'out of touch' with the operational performance of your team – in short, no compromise Business Intelligence and ERP where you want it, how you want it, when you want it!

## 2. Sounds interesting – how does it work?

The solution works by first connecting the device in your hand to your enterprise platform. **2Go** can use existing gateway connections and can also incorporate VPN connections if that is desired/required. From there the **2Go** server does the heavy lifting of translating, on demand, the content from your server to a format that can be viewed and interacted with on your mobile device. To the user, they are able to now securely view and interact with all the content they are familiar with. Filling out forms, creating reports, and reviewing presentations is now all available to them on their mobile device. It doesn't matter if the server interface was originally incompatible with the mobile device to begin with. **2Go** takes care of that for you.

## 3. What content can I work with?

We support a very wide variety of Business Intelligence and ERP applications regardless of format or vendor from suppliers such as Microsoft, Oracle and SAP (**including custom or bespoke modules**) as well as content types from all of the popular BI reporting and dashboards vendors, as well as more generic file types such as Excel spreadsheets, Word documents, Powerpoint slide decks, and interactive PDF files on your mobile device! It doesn't matter if your enterprise applications leverages Adobe Flash, Active X, Silverlight, Java or native solutions not generally compatible with mobile platforms, **2Go** takes care of that for you.

Use all of these and more with just 2Go on your iPad!

#### 4. Do I need to change any of my content or application to have it work with 2Go?

No! One of the key features of our **2Go EnAML** technology is that you do not have to re-engineer anything just to go mobile – so now instead of having a bunch of different apps from different vendors all with different interfaces pushing limited interactivity when compared to what you already get on your desktop – with **2Go**, you don't have to compromise! Using **2Go**, you get the same content, the same applications, the same functionality you are familiar with along with all of the enhanced simplicity and interactivity mobile devices deliver.

#### 5. Sounds good so far BUT how secure is this?

You are right to be concerned about the security of your data as this represents one of your organisation's most valuable assets and it is all too easy for users to lose their device (or in some cases have them stolen) and the last thing you want is for your company data to go with the device!

**2Go EnAML** has a very simple solution to this conundrum – the data never leaves the server! What this means is that the user is not downloading data to their device but using the highly sophisticated **2Go** system to deliver the ability to interact with the content in a **fully data secure** environment.

This not only means you can rest assured that your data is safe but also because the data stays on your server, then you can also be certain that you are compliant with any Data Protection/Data Compliance requirements.

#### 6. How will my users be able to access the 2Go system ?

Provisioning new users is a very straightforward process which entails sending an 'intelligent' email from the 2Go Admin portal which has a singular one time use. The 'intelligent' email provides 2 links in it – the first taking the user to the relevant app store e.g. iTunes in the case of an iPad, to enable them to download the free of charge **2Go** app and the second binds the device to the profile you specified. Done, a user can be provisioned and leveraging their own content or applications within minutes. No confusion, no training and no limitations. Just secure access to the systems they are familiar with.

#### 7. How quickly can I get 2Go in place?

**Immediately** – just contact us at either [info@ethostec.net](mailto:info@ethostec.net) or call directly on +44 (0) 1295 675867
